PROJECT DESIGN PHASE

Problem solution fit :

Project Title: Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites using Tableau

Purpose

To solve the problem of understanding the global distribution, categories, and trends of UNESCO World Heritage Sites by creating clear and interactive Tableau dashboards that provide useful insights for cultural awareness and tourism analysis.

How the Solution Fits :

• **Identifies the Real Problem:** Large UNESCO heritage datasets are difficult to understand in raw table format.

• **Uses Existing Data:** The UNESCO World Heritage dataset is publicly available but not easy to analyze without visualization.

• **Fits User Needs:** Provides simple, interactive dashboards that anyone can understand without technical knowledge.

• **Leverages Trusted Tools:** Uses Tableau, a reliable data visualization tool, to present information clearly.

• **Helps Stakeholders**: Supports tourism researchers, students, and policymakers in understanding heritage distribution.

• **Centralized Visualization:** All UNESCO heritage site data is presented in one dashboard platform.

• **Region and Country Comparison :** Users can easily compare heritage sites across regions and countries.

• **Trend Identification** : Students and researchers can quickly see trends across years.

• **Interactive Understanding :** Filters, charts, and maps make the data easier to explore.

• **Saves Time** :Users can analyze insights quickly instead of manually studying large datasets.
